GENERAL JOB DESCRIPTION

The Systems Integration and support Engineer will assist in the building and updating DCGS-A v3.x Systems. This will include designing and planning, test, debug, and deploy applications on a existing infrastructure SW. The ideal candidate should have experience in MS, Linux and Unix operating systems. In addition, a strong back round in VMware ESX systems is important. Day to day tasks include but not limited to:

- Working with Army Intelligence customers to transform requirements to work packages for new software releases.
- Building New releases on updated platforms and environments
- Troubleshooting test failures and their room causes
- Support to test team and IA groups
- Working in a collaborative development environment, providing mentoring to less experienced team members

CANDIDATE REQUIREMENTS

Extensive experience with Computer systems

Experience with Databases and their management

Experience with setting up and deploying enterprise services

Experience with XML and XML Schemas

Additional but not required:

Experience with ESRI geospatial products and development frameworks.

Experience with INTEL tools and applications

Working knowledge of simulation and stimulation tools
